

In the Claims

1. (original) A biodegradable polyester resin composition having antistatic ability in which biodegradable polyester resin contains glycerin fatty acid ester and alkyl sulfonate, wherein the said glycerin fatty acid ester is saturated and unsaturated fatty acid with a carbon number of 8 ~ 22 in terms of constituent fatty acid and glycerin fatty acid monoester whose monoester content is 50 w/w% or higher and a combined quantity of the said glycerin fatty acid monoester and the said alkyl sulfonate is in a range of 0.2 ~ 5 weight parts in relation to 100 weight parts of the biodegradable polyester resin.

2. (original) The biodegradable polyester resin composition having the antistatic ability as set forth in Claim 1, wherein the ratio of glycerin fatty acid monoester to alkyl sulfonate is 50/50 ~ 90/10 on a weight basis.

3. (currently amended) The biodegradable polyester resin composition having the antistatic ability as set forth in Claims 1 ~~or~~ 2, wherein polyester resin is polylactic acid resin or resin mainly composed of polylactic acid.

4. (original) The biodegradable polyester resin composition having the antistatic ability as set forth in Claim 1, wherein the ratio of glycerin fatty acid monoester to alkyl sulfonate is 65/35 ~ 90/10 on a weight basis.

5. (original) The biodegradable polyester resin composition having the antistatic ability as set forth in Claim 1, wherein the ratio of glycerin fatty acid monoester to alkyl sulfonate is 75/25 ~ 90/10 on a weight basis.

6. (currently amended) Films, sheets and other molded articles obtained by molding of biodegradable polyester resin composition, wherein the said biodegradable polyester resin composition is any of the biodegradable polyester resin compositions having the antistatic ability as set forth in Claims 1 to ~~5~~.
